Languages: C#, TypeScript, JavaScript, Python, SQL, Dart, Java, C++

Frameworks & Application Development: .NET, React, Angular, Node.js, Flutter, React Native, Unity

Databases & Cloud: PostgreSQL, MS SQL Server, MySQL, AWS, GCP

DevOps & Tools: Docker, CI/CD, IIS, Git, PowerBI, Postman, Swagger, Visual Studio, Active Directory, PowerAutomate

Work Experience

Intellino Technology Inc.

Windsor, Ontario

Senior Full-Stack Developer - Retail Technology / SaaS

Sept 2025 - Present

- Architected and developed a cross-platform mobile application (Android & iOS) using Flutter, Dart, .NET, C#, Postgres, and Google Cloud Platform, supporting scalable device and content management.
- Designed and implemented the cloud architecture for the platform, including API gateways, authentication, storage, and data pipelines, with a focus on scalability and SaaS deployment.

Magna Electric Vehicle Structures

St. Claire, Michigan

Software Solutions Developer - Automotive Industry

June 2024 - Sept 2025

- Led development of multiple full-stack applications improving process efficiency, operational visibility, and decision-making using React, C#, .NET, TypeScript, SQL, AWS, Docker, PowerBI, CI/CD, and PowerAutomate.
- Designed and delivered a production tracking and shipment forecasting dashboard that correlated invoiced demand with multi-stage inventory levels across the factory, enabling proactive identification of supply gaps and near-term production risks.
- Built an employee engagement and suggestion management platform with secure Active Directory SSO, workflow-based reviews, and management visibility.
- Mentored junior developers and interns, providing guidance on full-stack development and OOP principles.

Rocket Innovation Studio

Windsor, Ontario

Full Stack Web Developer - Financial Technology

Nov 2021 - Aug 2023

- Collaborated with cross-functional teams to design and deliver full-stack web applications for financial technology products using Angular, React, .NET, TypeScript, Node.js, SQL, AWS, Docker, and CI/CD.
- Led the technical implementation of a conversion-focused sign-out experience, transforming it into an interactive cross-selling gateway and increasing user product conversion by 12%.
- Drove architectural and technical decisions for client-facing features, balancing performance, long-term maintainability, and product goals.

DataRealm Inc.

Windsor, Ontario

Lead Software Developer - Research and Development, Automotive Industry

Oct 2017 - Nov 2021

- Led Agile-based design and development of a custom augmented reality (AR) training platform deployed to Microsoft HoloLens and Android devices, enabling location-based holographic training experiences.
- Architected the AR data backend to store and serve scene metadata (objects, text, coordinates), supporting scalable content creation and deployment.
- Delivered on-site AR training within a manufacturing environment, improving training performance by 17%.
- Mentored and managed junior developers while serving as the primary technical point of contact for clients and stakeholders, coordinating requirements, feedback, and delivery from early design through deployment.

Education

University of Windsor

Windsor, Ontario

Bachelor of Science (BSc), Computer Science

May 2017
