Windsor, Ontario, Canada | 226-787-2414 | mohammedelsaadi@gmail.com | [linkedin.com/in/moelsaadi](https://www.linkedin.com/in/moelsaadi)

Professional Summary

Senior Full-Stack Developer with 8+ years of experience building production software across SaaS, automotive manufacturing, fintech, mobile, and R&D, including AI-powered products and production AI integrations.

Experienced in designing end-to-end systems spanning React/TypeScript frontends, C#/.NET APIs, SQL databases, cloud infrastructure, mobile apps, and integrating with physical devices and manufacturing environments.

Strong track record of turning business and technical problems from requirements through architecture, implementation, deployment, and production support, while using AI-augmented engineering workflows to accelerate development without sacrificing technical ownership, code quality, or architectural judgments.

Technical Skills

Languages: C#, TypeScript, JavaScript, Python, SQL, Dart, Java, C++

Frontend & Mobile: React, Angular, Flutter, React Native, HTML/CSS

Backend: .NET, ASP.NET Core, REST APIs, Node.js, NestJS, GraphQL

Data: PostgreSQL, SQL Server, MySQL, Redis

Cloud & DevOps: AWS, GCP, Docker, CI/CD, Cloudflare Workers, Cloudflare D1/R2, IIS

Tools & Platforms: Git, Power BI, Power Automate, Swagger/OpenAPI, Visual Studio, Unity

AI & Developer Tools: AI/LLM integrations, prompt engineering, Claude Code, OpenAI Codex, MCP Server, AI-augmented development, debugging, refactoring, testing, code review, and rapid prototyping

Work Experience

Intellino Technology Inc.

Windsor, Ontario

Senior Full-Stack Developer - AI-Powered Retail Technology / SaaS

Sept 2025 - Present

- Architected and developed a cross-platform Flutter application for Android and iOS used to provision, configure, and manage cloud-connected retail devices.
- Designed and implemented backend services and APIs in C#/.NET supporting device management, user authentication, configuration, content delivery, and synchronization with PostgreSQL.
- Designed cloud architecture on Google Cloud Platform, including containerized services, asynchronous messaging, storage, authentication, and data-processing workflows supporting a scalable SaaS platform.
- Built device provisioning workflows spanning the mobile client, cloud APIs, local networking, and physical hardware, requiring end-to-end troubleshooting across software and device boundaries.
- Built production AI-powered content pipelines that ingested business reviews, identified high-quality customer feedback, and generated concise customer-facing messaging for connected retail displays.
- Used AI-augmented engineering workflows throughout architecture, implementation, debugging, testing, and deployment while retaining ownership of technical decisions and production quality.

Magna Electric Vehicle Structures

St. Clair, Michigan

Software Solutions Developer - Automotive Industry

June 2024 - Sept 2025

- Led development of full-stack applications supporting manufacturing operations, production planning, inventory visibility, and business decision-making across a large automotive manufacturing facility.
- Designed an inventory and shipment forecasting platform that matched invoiced demand against multi-stage inventory to identify supply gaps and near-term production risks.
- Built interactive React dashboards backed by C#/.NET services and SQL data models, translating complex manufacturing data into actionable information for production and management teams.
- Developed a web-based manufacturing vision portal that enabled users to view, search, and investigate computer-vision images from local plant storage and AWS S3, linked to production records in SQL.
- Designed and built an employee engagement and suggestion-management platform with Active Directory SSO, role-based workflows, review processes, notifications, and management visibility.
- Automated operational and administrative workflows using Power Automate and integrations with existing enterprise systems, reducing manual steps and improving information flow between teams.
- Mentored junior developers and interns in full-stack development, architecture, debugging, code review, and effective use of AI-assisted engineering workflows.

Rocket Innovation Studio

Full Stack Web Developer - Financial Technology

Windsor, Ontario

Nov 2021 - Aug 2023

- Developed and supported customer-facing financial technology applications using Angular, React, C#/.NET, Node.js, SQL, AWS, and containerized deployment workflows.
- Served as Technical Lead for the implementation of a redesigned signed-out customer experience, coordinating technical decisions across frontend and backend development and helping translate product requirements into an implementation strategy.
- Delivered an interactive cross-selling experience that guided customers toward relevant financial products and contributed to a 12% increase in product conversion.
- Designed reusable frontend components and application patterns while contributing to shared architecture used across customer-facing experiences.
- Worked across REST APIs, application services, databases, and frontend systems to diagnose production issues and deliver maintainable solutions across a large enterprise application ecosystem.
- Contributed to architecture discussions, code reviews, technical planning, and collaboration with cross-functional product and development teams.

DataRealm Inc.

Lead Software Developer - Research and Development, Automotive Industry

Windsor, Ontario

Oct 2017 - Nov 2021

- Led the architecture and development of a custom augmented-reality training platform deployed to Microsoft HoloLens and Android devices for industrial and manufacturing environments.
- Designed the application's backend and data model for storing and serving AR scene metadata including objects, text, coordinates, media, and training content, enabling reusable and dynamically configurable training experiences.
- Developed Unity/C# applications and supporting .NET services used to deliver interactive AR training in live manufacturing environments.
- Delivered an on-site AR training implementation that improved measured training performance by 17%.
- Worked directly with clients and stakeholders to gather requirements, demonstrate solutions, resolve technical issues, and translate operational needs into product functionality.
- Served as the primary technical point of contact while mentoring and coordinating developers throughout design, implementation, testing, deployment, and ongoing support.

Recent Projects

Board Game Menu / 3D Crate Planner

React, TypeScript, Three.js, Cloudflare Workers, D1, R2

[Live Demo](#) / [LinkedIn Post](#)

- Designed and built a full-stack web application for selecting board games and visually planning how they fit inside a real-world storage crate through an interactive Three.js interface.
- Implemented 3D packing behavior using real box dimensions, constrained rotations, stacking rules, and responsive desktop/mobile layouts to closely mirror the physical crate.
- Built persistent menu creation and editing, game administration, filtering, media management, and backend APIs using Cloudflare Workers, D1, and R2.
- Used AI-augmented development to take the project from concept through UX, 3D implementation, frontend/backend development, debugging, and deployment in a single evening, while personally directing the architecture, product decisions, and iterative refinement.

Argus – Inventory & Demand Planning Platform

React, TypeScript, C#/.NET, SQL

- Designed and built a full-stack planning platform for comparing inventory against upcoming demand and identifying coverage risks.
- Built reusable React/TypeScript workflows backed by C#/.NET APIs and structured JSON contracts.
- Modeled business rules for reserve thresholds, yields, shortages, and projected inventory coverage.
- Designed the product from requirements through architecture, implementation, testing, and iterative refinement using AI-assisted development.

Education

University of Windsor

Bachelor of Science (BSc), Computer Science

Windsor, Ontario

May 2017
